### **Project Summary: PCI DSS Compliance Tool Recommendation**

As the GRC Analyst, I was tasked with selecting a compliance tool to help SecureTech meet PCI DSS requirements for its newly onboarded financial industry clients. I focused on Scenario 2: Payment Processing Compliance and researched two leading compliance tools, comparing their features, pricing, usability, and effectiveness. I then submitted a recommendation report to my supervisor, Mark Taylor, justifying the selected tool based on its ability to support data protection, secure payment processing, monitoring, and audit readiness.
