### **Project Summary: Comprehensive GRC Strategy for DataServe Solutions**

I developed a comprehensive GRC strategy for SecureTech's new client, DataServe Solutions, to address their multi-jurisdictional compliance needs with frameworks such as PCI DSS, GDPR, and CCPA. The project began with outlining governance structures, assigning roles and responsibilities, establishing a policy framework for key areas like data privacy and risk management, and defining escalation paths for incident response and compliance decision-making. The strategy was tailored to support the client's risk management, regulatory compliance, and business objectives.
